530 nm DC-1 MBd RedLink®

Fiber Optic Transmitter

Datasheet

DESCRIPTION

Firecomms DC to 1 MBd green 530 nm transmitter is designed for maximum distance at low-speed communication in Plastic Optic Fiber (POF). It is housed in a non-conducting plastic RedLink® connector. The housings are compatible with the Versatile Link style fiber plug and are optimised for use with both POF and Polymer Clad Silica (PCS).

The transmitter can be driven from TTL type logic drivers. It operates over the industrial temperature range of -40 °C to +85 °C, supporting many industrial applications where reliable command and control response is required in electrically harsh environments.

The transmitter utilizes an eye-safe, highly-efficient gallium nitride LED. Since the attenuation of POF is lower at green wavelengths a maximum link distance of greater than 150 m can be easily achieved. The transmitter operates over a wide range of drive current that can be adjusted using a serial resistor to minimise current consumption for known fiber distances.

FEATURES

- Optimised for data rates from DC to 1 MBd
- Visible LED at green wavelength (530 nm)
- Extended length applications over POF (150 - 200 m, depending on data rate)
- Industrial temperature range -40 °C to +85 °C
- RoHS compliant and flame retardant (UL 94 V-0) connector housings
- TTL/CMOS compatible for ease of design
- Low pulse width distortion
- Low current consumption
- Compatible with Versatile Link cables and connectors

ABSOLUTE MAXIMUM RATINGS

These are the absolute maximum ratings at or beyond which the component can be expected to be damaged.

Notes:

1. 260 °C for 10 sec, one time only, at least 2.2 mm away from lead root
2. When peak forward current exceeds 20 mA then the duty cycle must maintain a pulse width (PW) less than 1 μ s and average forward current less than or equal to 20 mA. [$20 \text{ mA} \leq I_{\text{FPK}} \leq 40 \text{ mA} \leftrightarrow I_{\text{FAVG}} \leq 20 \text{ mA AND PW} \leq 1 \mu\text{s}$]

PART HANDLING

Firecomms RedLink[®] connectors are auto-insertable and tested for handling in static-controlled assembly processes (Human Body Model - HBM). Cleaning, degreasing and post solder washing should be carried out using standard solutions compatible with both plastics and the environment. For example, recommended solutions for degreasing are alcohols (methyl, isopropyl and isobutyl). Acetone, ethyl acetate, phenol or similar solution-based products are not permitted.

In the soldering process, non-halogenated water-soluble fluxes are recommended. RedLink[®] connectors are not suitable for use in reflow solder processes (infrared/vapor-phase reflow). The dust plug should remain in place during soldering, washing and drying processes to avoid contamination of the active optical area of each part.

The Moisture Sensitivity Level (MSL) classification of this device is 2a according to JEDEC J-STD-020.

The shelf life of an unopened MBB (Moisture Barrier Bag) is 24 months at < 40 °C and < 90 % R.H.

Once the Moisture Barrier Bag is opened, the devices can be either;

- a) Stored in normal factory conditions < 30 °C and < 60 % R.H. for a maximum of 672 hours (4 Weeks) prior to soldering
- b) Stored at < 10 % R.H. (Dry Cabinet)

PACKING INFORMATION

Components are packed in PVC anti-static tubes and in moisture barrier bags. Bags should be opened only in static-controlled locations, and standard procedures should be followed for handling moisture sensitive components.
