## **Eval-FB2M5KVR** Ethernet OptoLock<sup>®</sup> Evaluation Kit User Guide

### **OVERVIEW**

The Eval-FB2M5KVR evaluation kit enables evaluation of the Firecomms OptoLock<sup>®</sup> transceiver for plastic optic fibre (POF) and large core glass fibre (200, 400 um PCS). The kit includes a single OptoLock<sup>®</sup> transceiver premounted onto a simple PCB that allows easy application of DC power via standard 2 mm diameter DC jacks. Data inputs (TD +/-) and data outputs (RD +/-) are connected via standard screw terminal SMA connectors. A single loopback POF cable is also included.

For particular POF or PCS lengths and assemblies please contact Firecomms Applications support directly.

### **EVALUATION KIT CONTENTS**

The Evaluation Kit contains the following:

- 1. Evaluation PCB
- 2. FB2M5KVR mounted onto the evaluation PCB
- 3. POF cable (1 m, 0.5 NA, 2.2 mm jacket simplex POF)
- 4. FB2M5KVR Datasheet

#### **INITIAL SETUP**

- 1. Connect GND of a DC power supply to the ground points of the PCB (black terminals).
- 2. Connect 3.3 V to each of the Tx and Rx VCC jacks (red terminals).
- 3. To monitor the signal detect function, connect an oscilloscope probe 1 MΩ input to the SD test point.
- 4. Connect suitable pattern generator differential data signals via SMA cables to the TD +/- data pins.
- 5. Connect the RD +/- data pins to a suitable high-speed oscilloscope using 50  $\Omega$  termination and high-speed coax, SMA terminated cables.
- 6. For a loop-back cable test, insert the POF cable into the Tx and then loop it back to the Rx side of the OptoLock<sup>®</sup> transceiver. Push in the OptoLock<sup>®</sup> clamp to lock it securely into place.
